## PREFACE

IN SUBMITTING this booklet for your approval, we desire to call your attention to the really artistic effect in classic and modern glass mosaics, and hope we may have in this work, covering the interiors of fine homes and public buildings, the co-operation of Architects of distinctive and refined taste.

Glass mosaics for wall panels, or mantel facings, etc., are the most beautiful and artistic in richness of their coloring and design; the great variety of opalescent and other glass combined in the metallic effects in gold, silver and bronze coloring of every shade in speckled granite and crackline surface, showing the color of the rich opal or iridescent glass through the gold or silver covering, giving the beautiful shades of leaves in their fall colors, or antique metals, in their great variety, according to the effect desired in keeping with the architecture and surroundings.

We desire to call your attention to the absolute durability of this work, which by the different firing processes combines the metal and glass thoroughly, making them in reality one substance, regardless of their metallic or color surface.

These mantel facings are complete in one piece and the glass is set in a composition which is absolutely durable. For all panels they can be made in full size if not too large to handle, in which case they can be made in sections as best suitable to place in position.

It being impossible to give designs for the great variety of uses for this class of work, we wish to say that we shall be pleased to furnish special designs in co-operation with the architects and in accordance with their instructions.

We hope this booklet will appeal to your taste, as we have endeavored to show herein the artistic results which we are able to secure, due to our experience in this particular field.
